

For 2-3 years the local cable company Charter Communications has showed on their website I had the ability to get Charter Cable AND Charter.net Highspeed internet yet when the technicians come out they say "your too far from the nearest line". I keep being fed the line "since there are 30+ houses on your road we will look into expanding onto this road". I hear alot of talk and see no action at all. I would be happy with a sub DSL speed of 96kbps (kilo bit per second). I keep getting the run around. There is a minimum of approx. 11 houses on this road that would use the charter.net internet service. If there is any way possible could you assist me with the knowledge or knowhow into a way of aquiring a highspeed connection without me paying the thousands of dollars to have a line run 702 feet to my house and the option of me moving into the city of Jasper? Thank you for your time,
Lee
